Continuation of 11. does NOT place the application in condition for allowance because: The claimed invention does not disclose the RNG application similar by structure to the applied invention and based on the stochastic character of different natural process. The cited references to the natural stochastic process are all electrical type generating processes that are man made. The space waste moving outside the earth is not man made, meaning the space waste are moving freely outside the earth without any help from electrical/electronic type device. How does the space waste moving freely used as a RNG? If the space waste or debris is moving freely in space, then how can a device be actuated if the space waste is randomly moving in space. The term actuation may be interpreted to be toggling or pressing of a switch. The definition of the word actuate is defined as: to make active; cause to function or act. How does the freely moving space waste become active, to cause to function or act when the space waste is already moving freely in space. The claimed limitation doe not clearly provide, show or provide steps of how RNG is and accomplished by the claimed invention. The examiner request applicant to point in the disclosure the support for the applicant's argument regarding the stochastic characteristic. Applicant argues the stochastic characteristic process, however the noted feature is not recited in the rejected claim(s). Although the claims are interpreted in light of the specification. limitations from the specification are not read into the claims. As discussed in the previous office action, Kitazawa discloses structurally applicants claimed invention as discussed above. As noted in MPEP 2114 a claim containing a recitation with respect to the manner in which the claimed apparatus intended to be employed does not differentiate the claimed apparatus from the prior art apparatus if the prior art apparatus teaches all the structural limitations of the claim. While features of Kitazawa are recited structurally, applicant's claims are directed to an apparatus that is not distinguished from the prior art in terms of structure rather than function. The only indication that claimed invention is a game is in the preamble. The body of the claim does not provide elements, rules procedures of an actual game play. The examiner has provided the broadest reasonable interpretation to applicant's claimed invention and references disclosing and/or teaching product appearing to be substantially similar in applicant's claimed invention. The burden shifts to the applicant to show the unobvious differences.
